

Vladimir Traigel

Senior Software Engineer — AI/LLM + Full-Stack

Belgrade, Serbia (Remote) | gtc.traigel@gmail.com | linkedin.com/in/vtraigel | github.com/windeko | vtraigel.dev

SUMMARY

Senior full-stack engineer with 10+ years shipping production systems, now focused on the intersection of full-stack product work and applied AI. Builds and operates production LLM and multi-agent systems using LangGraph and the Vercel AI SDK across multiple model providers. Background spans event-driven microservices, infrastructure-as-code on AWS, and modern React/Next.js front-ends. Comfortable owning a system end to end, from schema design through CI/CD to production observability.

SKILLS

AI / LLM: Large Language Models (LLM), LangGraph, Vercel AI SDK, Model Context Protocol (MCP), Multi-Agent Systems, Anthropic API, AWS Bedrock, OpenAI API, Google Gemini, Langfuse, Prompt Engineering, Retrieval-Augmented Generation

Languages: TypeScript, JavaScript, Go (Golang), Python, SQL

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS, TanStack Query

Backend: Node.js, Express, REST APIs, WebSockets, Microservices, Event-Driven Architecture, NestJS

Cloud & Infrastructure: Amazon Web Services (AWS), Pulumi, Infrastructure as Code (IaC), ECS, Lambda, RDS, S3, SQS, SNS, Docker, CI/CD, GitHub Actions

Data: PostgreSQL, MongoDB, MySQL, Redis

Observability & QA: Datadog, Sentry, OpenTelemetry, Vitest, Jest, Playwright

EXPERIENCE

Senior Software Engineer — Arbio

March 2024 – Present | Berlin, Germany (Remote)

- Build and operate production LLM and multi-agent services — guest-facing and voice agents, AI task and case orchestration — on LangGraph and the Vercel AI SDK, with a multi-provider model setup (Anthropic, AWS Bedrock, Groq, OpenAI, Gemini) and Langfuse for tracing and prompt management.
- Help drive the migration from a NestJS monolith to event-driven TypeScript microservices communicating over SNS/SQS.
- Own infrastructure-as-code across roughly 20 Pulumi stacks on AWS (ECS Fargate, RDS, ALB, EventBridge, Secrets Manager, Route53), with Datadog monitors defined as code.
- Ship modern full-stack features on Next.js with streaming AI interfaces.
- Contributed to securing €3M in funding and scaling the platform past 650+ listings.

Full-Stack Software Engineer — Andersen (client: Moonfare)

March 2022 – March 2024 | Lithuania (Remote)

- Helped transition core systems from a monolith to microservices, improving scalability and service stability.
- Delivered full-stack features across backend and frontend for products expanding into new markets.
- Contributed to platform work supporting growth to \$3.5M in annual revenue.

Backend Software Engineer — IXR

2021 | Remote

- Built and tested backend services; integrated third-party logistics (3PL) providers to improve delivery flexibility and cost-efficiency.

Backend Software Engineer — FreshCredit9

2020 – 2021 | Remote

- Integrated banking systems into a credit-comparison product, helping users find optimal loan options.

Web Development Team Lead

June 2019 – November 2020 | Remote

- Led backend and frontend development; scaled backend infrastructure with MongoDB clustering and owned CI/CD, improving team productivity and code quality.

Full-Stack Software Engineer — Phenom

2019 | Remote

- Built frontend and backend for a crypto exchange; helped the team reach the finals of the Binance Hackathon.

Team Lead / Full-Stack Software Engineer — WhenSpeak

2016 – 2019 | Russia

- Led a small development team across backend, testing and deployment; optimized WebSocket and RTMP server configurations.
- Earlier: built and maintained booking and hotel web services (Python/Django, MongoDB, MySQL).

EDUCATION

Master's Degree, Computers, Complexes, Systems, Networks

International Institute of Computer Technology (ICT) | 2011

CERTIFICATIONS

- Go: The Complete Developer's Guide (Golang) — Udemy
- MongoDB Basics — MongoDB University
- Verified International Qualifications — World Education Services

LANGUAGES

Russian (native) | English (fluent) | Serbian
